Pitch Deck

Creation is not the bottleneck. Delivery of thought to creation is.

- › AI made creation cheap. The human→AI input channel did not change: type text, describe, wait.
- › We change the input channel itself → **Mao3i** and the related suite.

Ideas fade faster than hands move

- › Today's trade: **fast but fading** (paper, dead ink) vs **faithful but slow** (design tools, menus, precision dragging).
- › Text got autocomplete years ago. Imagination did not.

Two models, strict separation of powers

- › Gemini describes; **our fine-tuned 23 model** decides; code places.
- › Geometry only from user strokes; validators fail closed — a hallucination becomes nothing.
- › Held-out test: **96.7%** vs 75.0 op accuracy over Gemini baseline, abstention F1 **0.97** vs 0.67, **<\$0.25** training.

Moat

- › Building with AI since **summer 2025** — the first wave of AI coding.
- › Team has lived the builder workflow: researchers, hackathon organizers, hackers (**5× hackathons won**), AI-native internship workflows.
- › **UI/UX focus — frictionlessness is the true moat:** even a little friction points people away.
- › **Data flywheel:** every accept / reject / relabel is a gold training label.
- › **Own model, not API glue:** our 2B beats the frontier baseline, trained for cents.

Beachhead

- › **Waterloo:** hackathons + a dense population of student builders.
- › **Hackathon distribution:** demo-first product, zero learning curve, spreads at build events.

The input channel deepens

- › **Engine is domain-agnostic:** flowcharts, circuits, chemistry, org charts = new template pack + vocabulary.
- › **Hybrid input:** drawing + text on one canvas.
 - Magic wand: circle a region, say “make it three.js” → it is.
 - Text boxes with `/runAi` : type what you don’t want to draw; it becomes elements.
 - Text descriptions customize drawn elements.
- › **Canvas as prompt-based environment:** environmental prompt variables live on the canvas.
- › **Wires and pages as code abstraction** — code abstraction in general.
- › Edge AI. Tablet/whiteboard SDK. Design-tool export.
